

ROBUST & READY FOR ACTION

SINGLE BASE
PALLET FOR
463L MILITARY
SYSTEM

NORDIC QUALITY AND DESIGN - A US OWNED COMPANY

NORDISK SINGLE BASE PALLET FOR 463L MILITARY SYSTEM

THE BEST OF TWO WORLDS

Drawing on more than 40 years of experience in design and production of state of the art air cargo pallets for civil aviation, Nordisk offers a Heavy Duty Single Base pallet for 463L military system that combines the recommendations defined in MIL-STD-1791 with commercial aviation requirements, resulting in a durable, heavy duty pallet offering low cost repair and 20% lower weight than the standard HCU-6/E pallet.

The shape and geometry of edge extrusions in high strength 7000-series alloy in combination with an effective attachment to the sheet, ensures high stiffness and rigidity. A single base pallet will not experience delamination.

INCREASE YOUR PAYLOAD

With fuel costs soaring, weight is becoming increasingly important in air freight. Nordisk's Single Base military pallet weighs 243 lbs (110 kg). A close to 20% reduction in pallet weight compared to other pallets currently available, gives you the choice to either transport more cargo per flight or reduce fuel cost.

The pallet is certified to NAS 3610, 1B6, with a maximum gross weight of 10,000lb (4,636 kg).

SAVE MONEY WITH LOWER LIFE CYCLE COST

Nordisk's Single Base military pallets unique but simple design makes it easy to repair. Repairs require no special tooling or high-tech repair procedures and can be done by any certified commercial repair & maintenance facility.

The heavy duty aluminum base sheet in high strength 7021-T6 alloy is resistant to heat, moisture and UV-light, ensuring a long service life.

GREATER FLEXIBILITY

Nordisk's Single Base pallet for 463L system is fitted with 22 standard D-rings for net attachment. In addition customers can chose to upgrade the pallet by including continued seat tracks for increased operational flexibility. Continued seat track allow studs or locks to be installed along the full length and width of the pallet, offering the loading crew maximum flexibility in securing loads to the pallet. Continued seat track also offers customers the choice to select and use a wide range of standard air cargo pallet straps and nets.

CAPABILITIES:

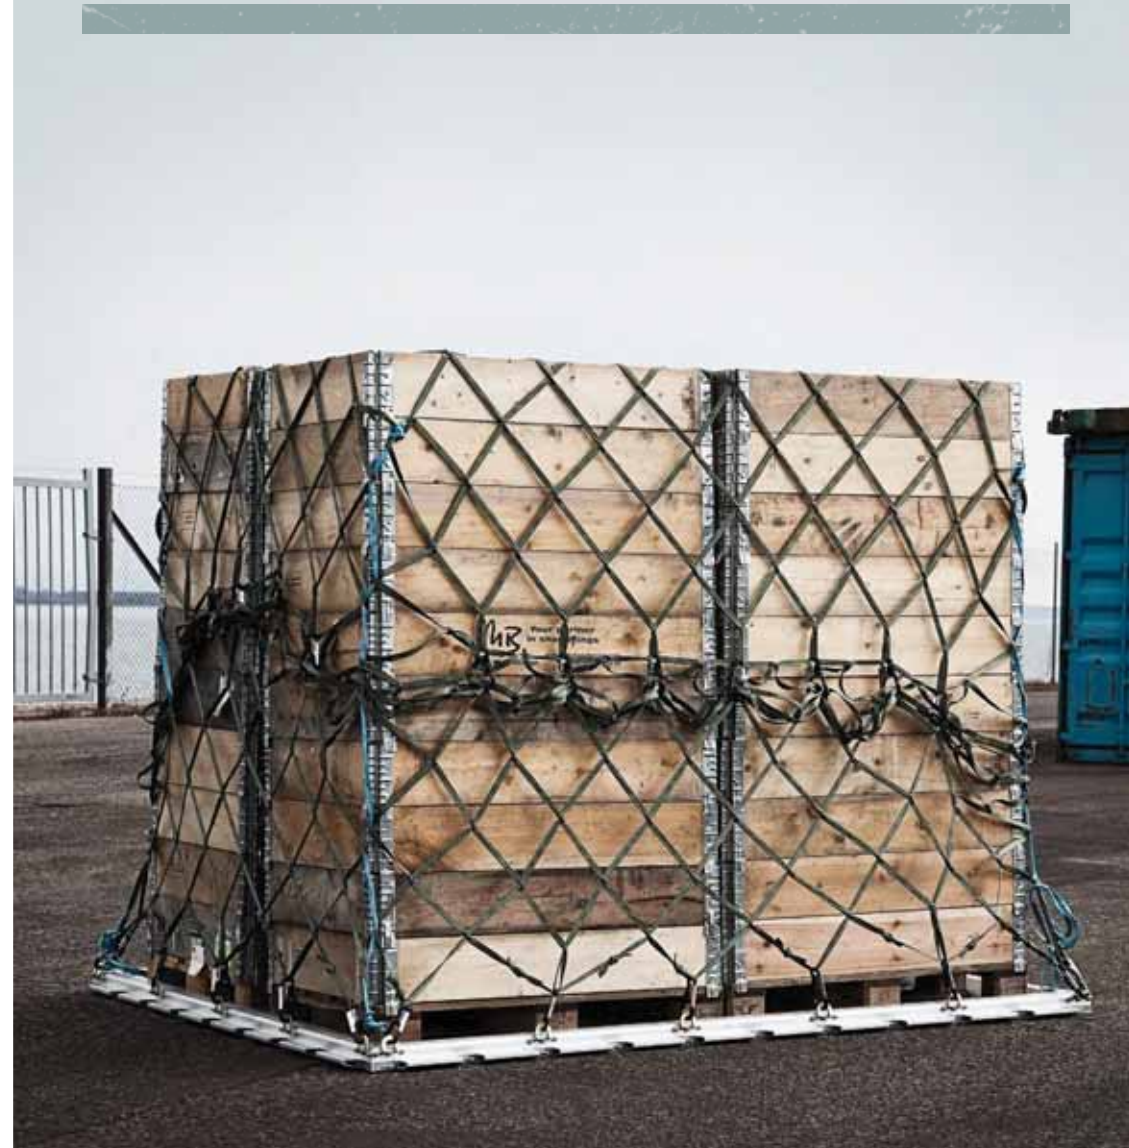

- Air- and surface transportable
- Is not affected by temperatures or climate change and does not absorb moisture
- Compatible with 463L loading restraint system
- 22 tiedown rings, continued seat tracks optional
- Meets military and commercial air transport requirements
- Easy to repair and maintain
- Provides rapid deployment of cargo
- Empty pallets can be stacked for storage

AIRCRAFT SUITABILITY:

C-5A, C-5B, C-5C, C-5M
C-17 Globemaster
C-130 E/C, C-130H, C-130J Super Hercules
C-27J Spartan
CH-47

TECHNICAL DATA:

Base size: 88 x 108 in / 2235 x 2743 mm
Height: 2.6in / 66mm
Tare weight: 243 lb / 110 kg
Max gross weight: 10,000 lb / 4,636 kg
Patent: US D617,522 S US D630,815 S

Nordisk Aviation Products is a world leader in the design and delivery of air cargo containers and pallets for civil aviation. The company certified its first cargo pallet in 1972 and its first lower deck container in 1974. Today, with more than 200 airline customers worldwide, and over 650,000 containers and pallets sold in the global aviation markets, Nordisk is used by almost every airline operating wide-body and freighter aircraft, enabling huge amounts of cargo and baggage to be transported safely and securely.
